CS 346: Daily Standup

Team #: ___214_____   Date: Feb 15 2023

Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

Name	What have you completed since the last meeting?	What are you going to complete today?	What obstacles are in your way?
Yang	Worked on updating the build.gradle file and making sure to get an installer working for our project, so that at each stage we can generate a new installer for the application → Should work for both windows and mac (we don't have a linux machine to test on but the case should be covered in the build file)	Helping team members if they need anything (pair programming), as well as checking over the commits/merges to make sure all pipelines are running and start writing some unit tests.	With unit testing, need to wait for the features to merge/pushed to their branches so that I can take a look at what needs to be done for the testing (mostly starter tests as we are in the early stages of the application)
Tim	Building console application → create directory in multi-project for necessary dependencies	Continuing to work on finishing the console application	

John	Work on GUI by adding a menu bar with organizational structure and documentation. Wrote unit tests for Menu Bar class.	Add to the controllers for the menu bar to complete functionality.	How are we going to sync the homepage with the actual note taking interface?
Hammad	Worked on the homepage and added simple buttons to the homepage. Runner for windows is still causing issues, but I have an idea on how to fix it.	Continue to attempt to fix the runner. Learn how to handle multiple instances of the GUI application.	Trying to integrate the notes with the homepage seems to be the main obstacle.

Outstanding

Do we need help with anything?

Decisions

Is there anything else we should capture from this meeting?
